

PUBLIC SAFETY ADVISORY

2010-01-15

The recent heavy rains have resulted in saturated soils and high surface run-off conditions.

The public should exercise extreme caution around creeks, streams and ditches. Fast moving water, debris torrents and unstable banks can be hazardous to people and animals.

Several significant landslides have occurred along high bank waterfront properties.

Minor flooding has occurred on some roads due to blocked or full culverts. Please remove debris blocking culverts on your property if it is safe to do so. Exercise caution and slow down driving through standing water.
